Career Objective

AI and Data Science undergraduate with hands-on experience developing software applications, backend services, REST APIs, and AI-powered solutions. Skilled in Python, Java, SQL, databases, microservices, Docker, and modern AI technologies. Strong foundation in problem-solving and software development, with a focus on building reliable, scalable applications and delivering practical solutions to real-world problems.

Education

Saveetha Engineering College, Chennai

B.Tech in Artificial Intelligence and Data Science (CGPA: 8.66/10)

2023 – 2027

Chennai

Dheeran Chinnamalai International Residential School

Higher Secondary (CBSE)

2021 – 2023

Krishnagiri

Technical Skills

Programming: Python, Java, C, SQL, JavaScript

Backend: Node.js, Express.js, Django, FastAPI, REST APIs, Microservices

Frontend: React.js, HTML, CSS

AI & ML: Machine Learning, Deep Learning, NLP, Computer Vision, LLMs, RAG, Transformers, OCR

Libraries: Scikit-learn, TensorFlow, PyTorch, OpenCV, YOLO, PaddleOCR, FAISS, Sentence Transformers

Databases: MongoDB, PostgreSQL, SQLite

Development: Git, GitHub, Docker, API Development, Model Deployment

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

KaviTamil Solutions

July 2024 – August 2024

Artificial Intelligence Trainee

Chennai

- Developed Python-based machine learning solutions using Scikit-learn on real-world datasets, implementing complete model development workflows.
- Built reusable data preprocessing and feature engineering workflows to transform raw datasets into model-ready inputs for Kaggle projects.
- Implemented, evaluated, and optimized machine learning models while applying validation techniques to improve performance and reliability.

Projects

FlipVision – AI Vision for E-Commerce | *Django, YOLO, PaddleOCR, ResNet50, SQLite*

FlipVision

- Developed an AI-powered e-commerce application using Django, implementing product management, order tracking, and multi-role access for customers, sellers, and administrators.
- Integrated YOLO, PaddleOCR, and ResNet50 for automated product detection, brand identification, freshness scoring, and expiry-date extraction from images.

Reva AI – AI Recruitment Platform | *Node.js, MongoDB, YOLO, PaddleOCR, REST APIs*

Reva AI

- Developed a recruitment platform with Node.js and MongoDB, building REST APIs for candidate information processing and recruitment workflow automation.
- Integrated YOLO and PaddleOCR to extract and structure candidate information from identity documents, with automated validation and multilingual NLP processing.

Triageon – ML Health Triage System | *Python, Node.js, React, REST APIs, MongoDB, Docker*

Triageon

- Built a full-stack application integrating Python-based ML APIs with a Node.js backend, React frontend, and MongoDB for real-time risk assessment workflows.
- Designed and containerized distributed services using Docker, enabling modular deployment and reliable communication between application and inference components.

TraceGuard AI – AI-Powered Cyber Investigation | *Python, FastAPI, FAISS, RAG*

TraceGuard AI

- Developed an offline cybersecurity application using FastAPI to ingest and process Windows Event Logs (.evtx) and network traffic (.pcap) for forensic investigation.
- Implemented a RAG-based natural language search system using sentence-transformer embeddings and FAISS, with automated mapping of security events to the MITRE ATT&CK framework.

Achievements

Semi-Finalist, Flipkart GRID 6.0 Robotics Challenge — Developed FlipVision, an AI-powered e-commerce application, selected among 1L+ registrations nationwide.

Finalist, NASSCOM Automation Using Agentic AI — Developed an agentic AI-based workflow automation solution, selected among top teams nationally.

Solved 200+ LeetCode Problems — Demonstrated strong problem-solving and algorithmic thinking through consistent practice in data structures and algorithms.
